OVERVIEW

In 2025 with all the existing apps, content platforms, frameworks, automated tools, and AI capabilities that generate content in a few clicks, what kind of website are we supposed to create?

This course offers an examination and practice of using the web as a canvas for expressing ideas, a lens for interpreting our world, and a platform for sharing ourselves.

OBJECTIVE

Students will be led to approach the internet as a canvas, with an emphasis on embracing the ever-evolving suite of web-based tools for creative expression.

The course will provide an introduction to coding with [P5.js](#), a library written in javascript (one of the building blocks of the internet). We will learn to translate drawings from pen and paper to code, and will incorporate interactive and time-based variables to create dynamic digital art work. Students will also create a

personalized portfolio website on mmm.page to showcase their [p5.js](#) sketch alongside the rest of their course-work from Summer Institute and past work.

All projects will utilize and be hosted on web-based platforms so that they may remain easily accessible to all students at the end of course.

PROJECTS

1. Drawing with code (p5.js)

Students will participate in a drawing exercise to create a series of illustrations using only ellipses and rectangles. They will start with Pen and Paper and then translate them to code with p5.js.

2. Expressions with Variables (p5.js)

Students will build off of their code drawings to integrate dynamic variables and create an interactive piece to be showcased on their personal portfolio site.

3. Portfolio (mmm.page)

Students will create a personal portfolio site in mmm.page to showcase their work and selves. The portfolio site must contain but is not limited to:

- A Homepage + at least two additional pages (“projects” and “about”)
- An embedded p5 sketch
- Custom assets (images, writing, GIFs, Video)

SCHEDULE

Day 1: Web as an expressive medium

Course introduction

Workshop: Intro to p5.js

- Pen + Paper Drawing exercise
- [p5.js](#) Drawing exercise

Day 2: Dynamic states and variables

Workshop: Continue p5 Sketches.
Introduce User Input + Dynamic
Variables

Introduction to portfolio project

Break

Workshop: Introduction of mmm.page

Day 3: Notes and Documentation

Discuss: documentation, explore past
student portfolio websites.

Workshop: mmm.page

- Creating and Linking pages
- Embedding p5 sketch
- Documentation

BREAK

Discuss: Appropriation in digital
media.

Workshop: mmm.page

Day 4: Finalizing and sharing your
website; Dissemination on the web

Work session

AI, software and tool bias
(discussion)

BREAK

Complete Submissions

Presenting work / Final Work Session

Q&A and closing remarks

RESOURCES

Resources and readings will be
provided with each lesson.
